**Holding Babies ~ Holding  
Parents: Infant  
Neurobehavioral & Social  
Emotional Development  
course**

23.-24.10.2017

Zagreb

Goals for the course are as follows:

- Describe neurological foundation of infant behaviors
- Review early social emotional development and essential importance of parent infant interaction
  - Identify risk factors for infants who experience repeated pain experiences
    - Describe infants at risk for neurobehavioral disorganization
    - Provide overview of theories of neurobehavioral development
  - Integrate concepts of sensory processing into neurobehavioral framework
    - Review of common neurobehavioral assessments used with infants and toddlers
- Discuss ways to integrate neurobehavioral assessment into clinical assessment (ST, OT, PT, early childhood educator)
  - Describe intervention strategies - how to read infant cues, adjust environmental factors, handling and positioning of infants, modify activities, modify interaction, promote parent infant interaction.
- Review long term developmental impact of early experiences with high risk infants and parents

**Workshop is accredited by Croatian chamber of health professionals.  
Registration at [www.hurt.hr](http://www.hurt.hr)**
